

September 10, 2009

Dear Parent,

As you may know, flu can be easily spread from person to person. Therefore, we are taking steps to reduce the spread of flu at South Iron School. We want to keep the school open to students and functioning in a normal manner during this flu season. **But, we need your help to do this.**

We are working closely with the Iron County Health Department and the Missouri Department of Education to monitor flu conditions and make decisions about the best steps to take concerning schools. We will keep you updated with new information as it becomes available.

At the present time, daily

- students are encouraged/reminded to wash their hands
- hand sanitizer is available for the students to use before entering the lunch room for breakfast and lunch
- students with a fever (100 and above) at school are sent home
- routine cleaning

**If the flu becomes more severe**, we may take additional steps to prevent the spread such as:

- conducting active fever and flu symptom screening of students and staff as they arrive at school,
- making changes to increase the space between people such as moving desks farther apart
- increase routine cleaning

For now we are doing everything we can to keep our school functioning as usual. Here are a few things you can do to help.

**Teach your children to wash their hands** often with soap and water or an instant hand sanitizer. You can set a good example by doing this yourself.

**Teach your children not to share personal items** like drinks, food or unwashed utensils, and to cover their coughs and sneezes with tissues. Covering up their coughs or sneezes using the elbow, arm or sleeve instead of the hand when a tissue is unavailable.

**Know the signs and symptoms of the flu.** Symptoms of the flu include fever (100 degrees Fahrenheit, 37.8 degrees Celsius or greater), cough, sore throat, a runny or stuffy nose, body aches, headache, and feeling very tired. Some people may also vomit or have diarrhea.

**Keep children with a fever at home.** Fever free means without using fever-reducing drugs the child does not have a fever. Keeping children with a fever at home will reduce the number of people who may get infected.

For more information, visit [www.flu.gov](http://www.flu.gov), or call 1-800-CDC-INFO for the most current information about the flu. We will notify you of any additional changes to our school's strategy to prevent the spread of flu.

Sincerely,

Michelle Miller, RN  
South Iron School Nurse
